## DETAILED ACTION

### *Specification*

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. *The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided.* The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. In line 6 of claim 1 and line 10 of claim 6, it is suggested that "provided for the cover" be changed to "provided on the cover" to clarify the claim recitation.

### *Drawings*

3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: 14 in figure 1. A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1724

5. Claims 1 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Howeth (4,482,367).

6. Howeth ('367) discloses an air filter assembly for a vehicle, comprising a case (12), a cover (62) detachably mounted to the case, a central outlet on the cover, a cylindrical filter element (26) mounted to the cover inside of the case, a plate (40) with a locating collar (42) for coaxially supporting the filter on the cover outlet at its upper end, and a bolt (44) and nut (45) for axially supporting the filter to the cover at its lower end, wherein removing the cover from the case removes the filter element from the case and disengaging the filter from the supporting members removes the filter from the cover (see figure 1, col. 4, lines 26-39, col. 6, lines 46-55). The filter structure will be capable of being used with a vehicle engine and arranged in a direction other than vertical with respect to the vehicle body and engine.

***Allowable Subject Matter***

7. Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The following is a statement of reasons for the indication of allowable subject matter: An air cleaner comprising a case, a cover detachably mounted to the case, a filter element accommodated in the case and having a cylindrical shape with a central axis, and a pair of support members provided on the cover, wherein the pair of support members can be engaged with both end portions of the filter element in an axial direction to hold the filter element between the members, and wherein removing the cover from the case removes the filter element from the case together with the cover and disengaging the filter from the support members

Art Unit: 1724

removes the filter element from the cover, and wherein one of the paired support members is mounted to the cover to be rotatable by a hinge device, and the support members can be engaged with the filter element by rotating the member in one direction and disengaged by rotating in another direction, is not taught, disclosed or suggested in a single reference or a combination of references in the prior art of record. The closest prior art to Wilber (2,962,121) discloses a hinged member for supporting a filter but fails to suggest a motivation for using the support with a filter that is removably attached to the cover of a filter case.

### *Conclusion*

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references listed on the attached PTO-892 form disclose filter-mounting arrangements.
